

# 5G Verticals Session

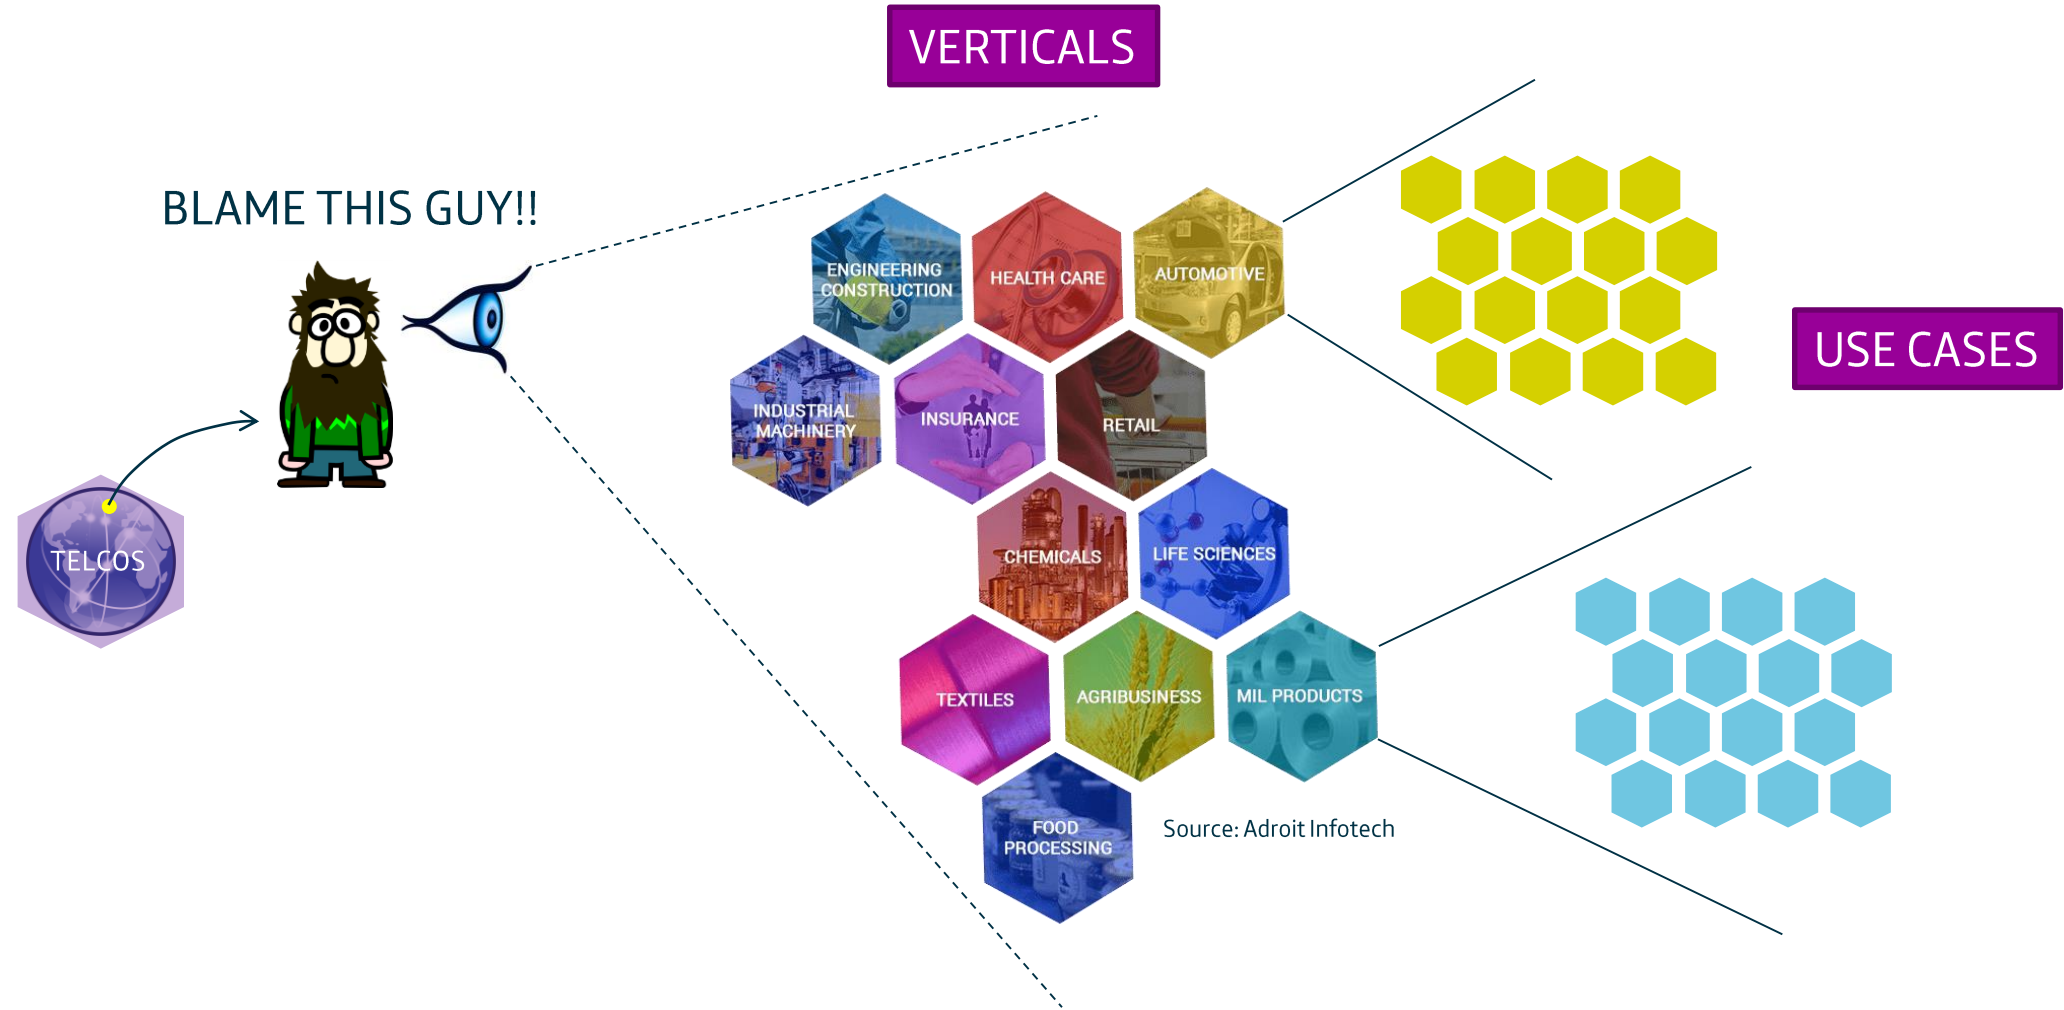

## *How can OSM accelerate 5G Vertical Services?*

Juan Rodriguez Martinez

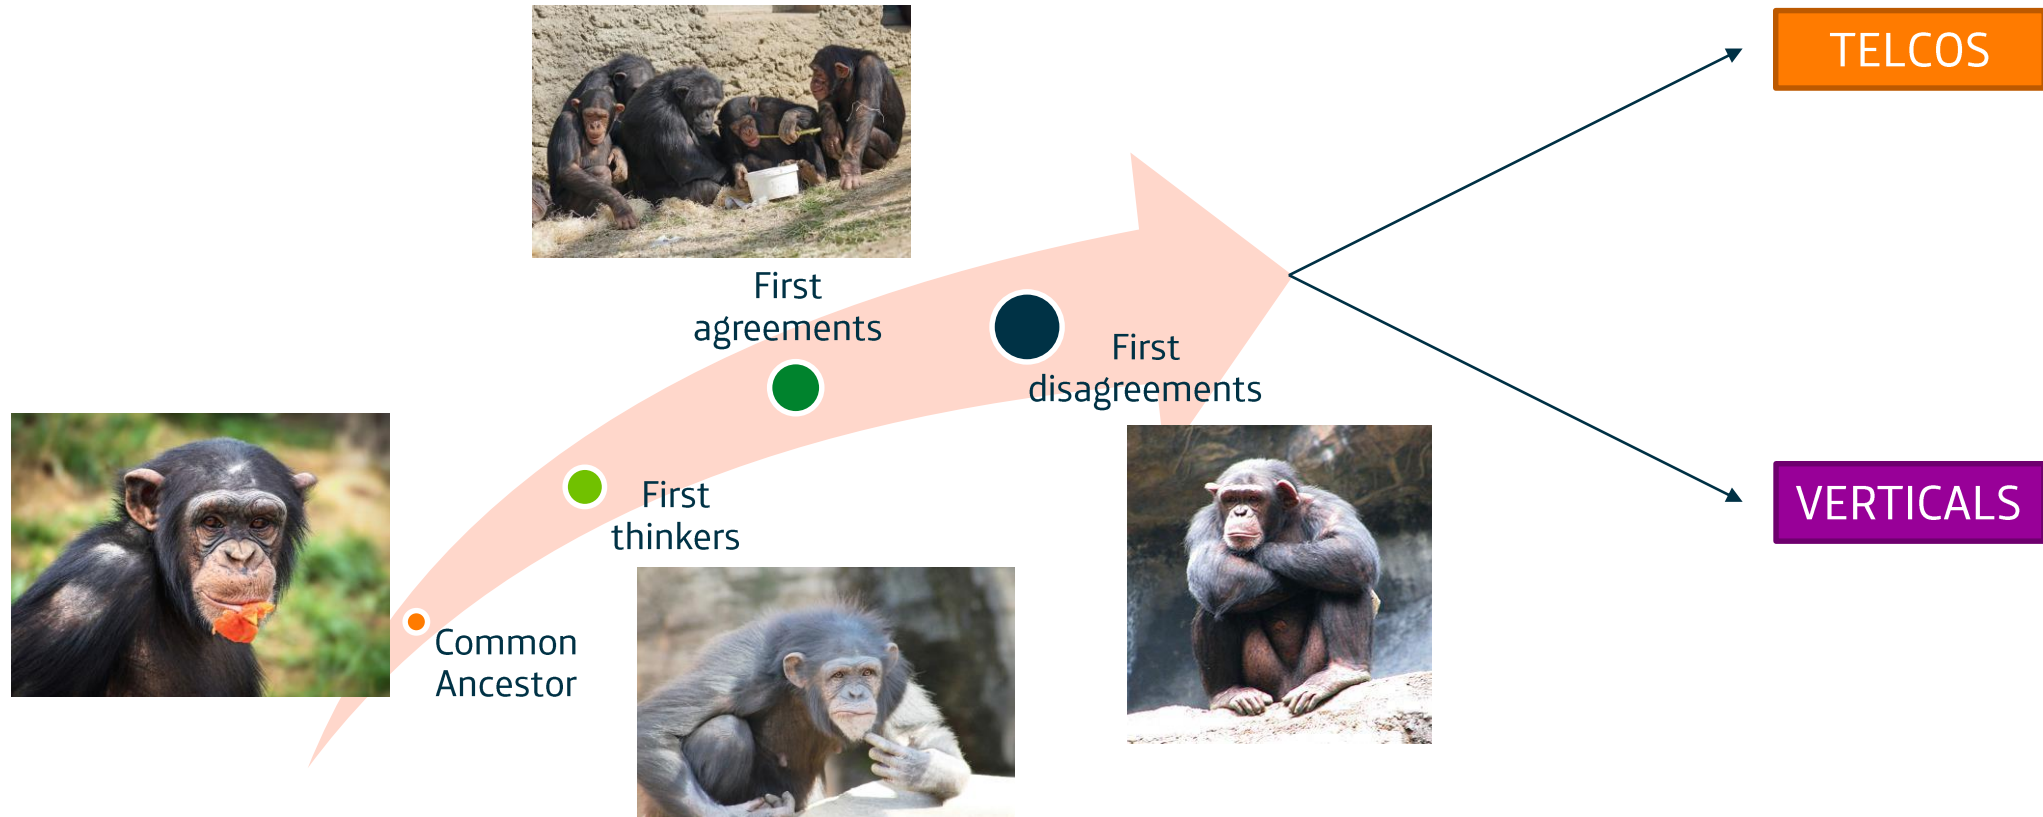

[juan.rodriguezmartinez@telefonica.com](mailto:juan.rodriguezmartinez@telefonica.com)

# Disclaimer!

# Telcos & Verticals have evolved differently...

# ... and language is a key divergence

## Telcos

- Reference Architecture
- Network Topology
- 5G frequencies
- Network KPIs
- Revenue

## Verticals

- What do I have to install?
- How do I connect things?
- As long as it is not Wi-Fi...
- Application KPIs
- Zero evaluation cost

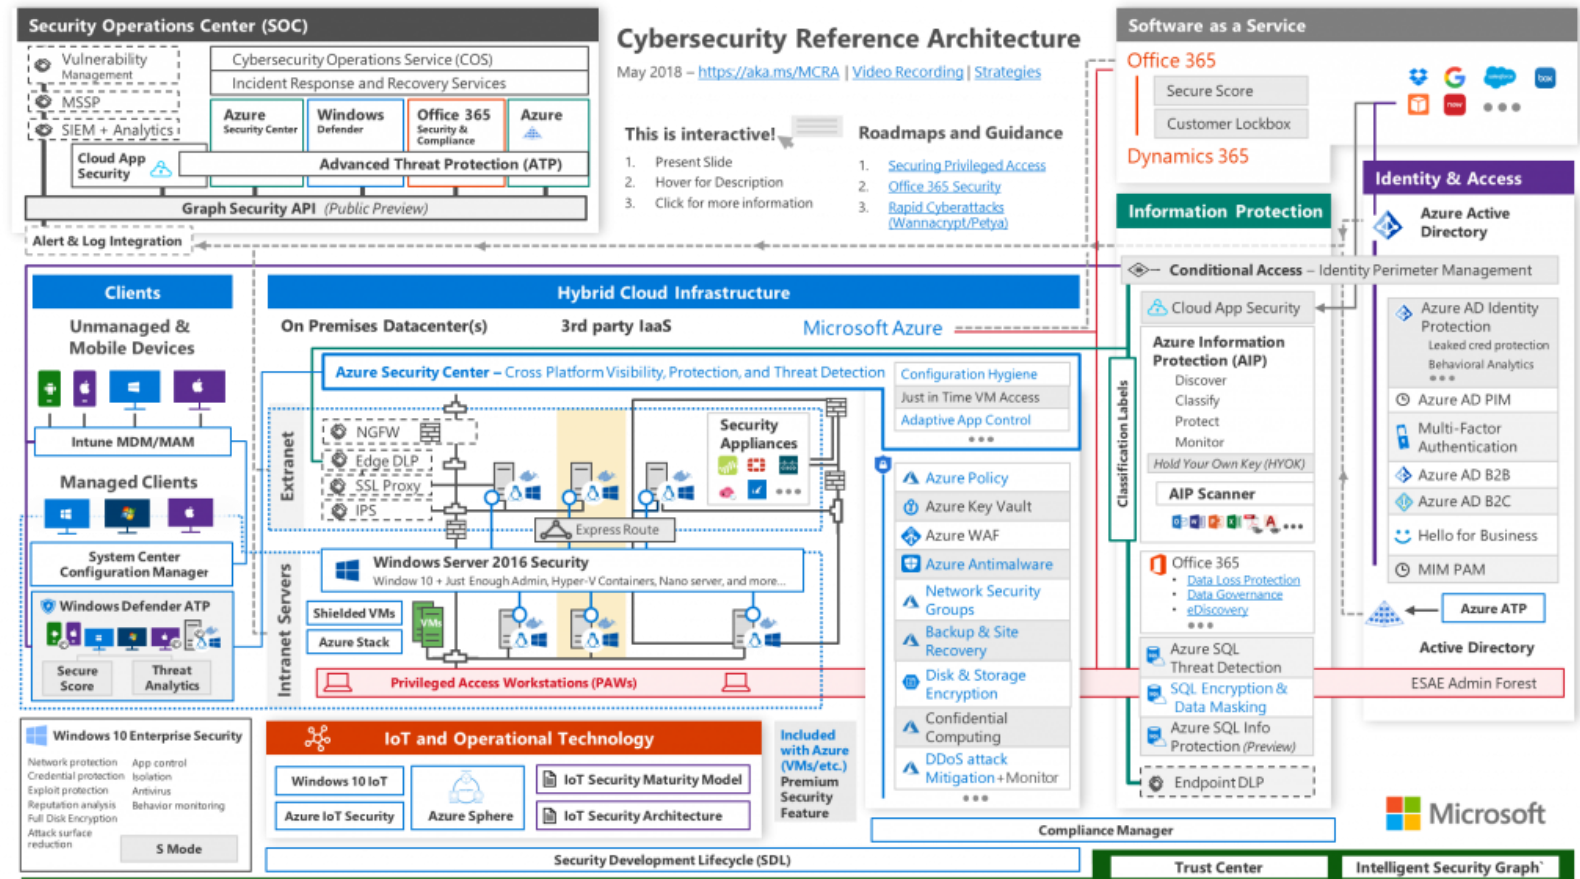

# About Reference Architectures: quick poll

How many of  
you work for a  
Vertical?

Please, take a look at the Figure

With the mindset of a Vertical...

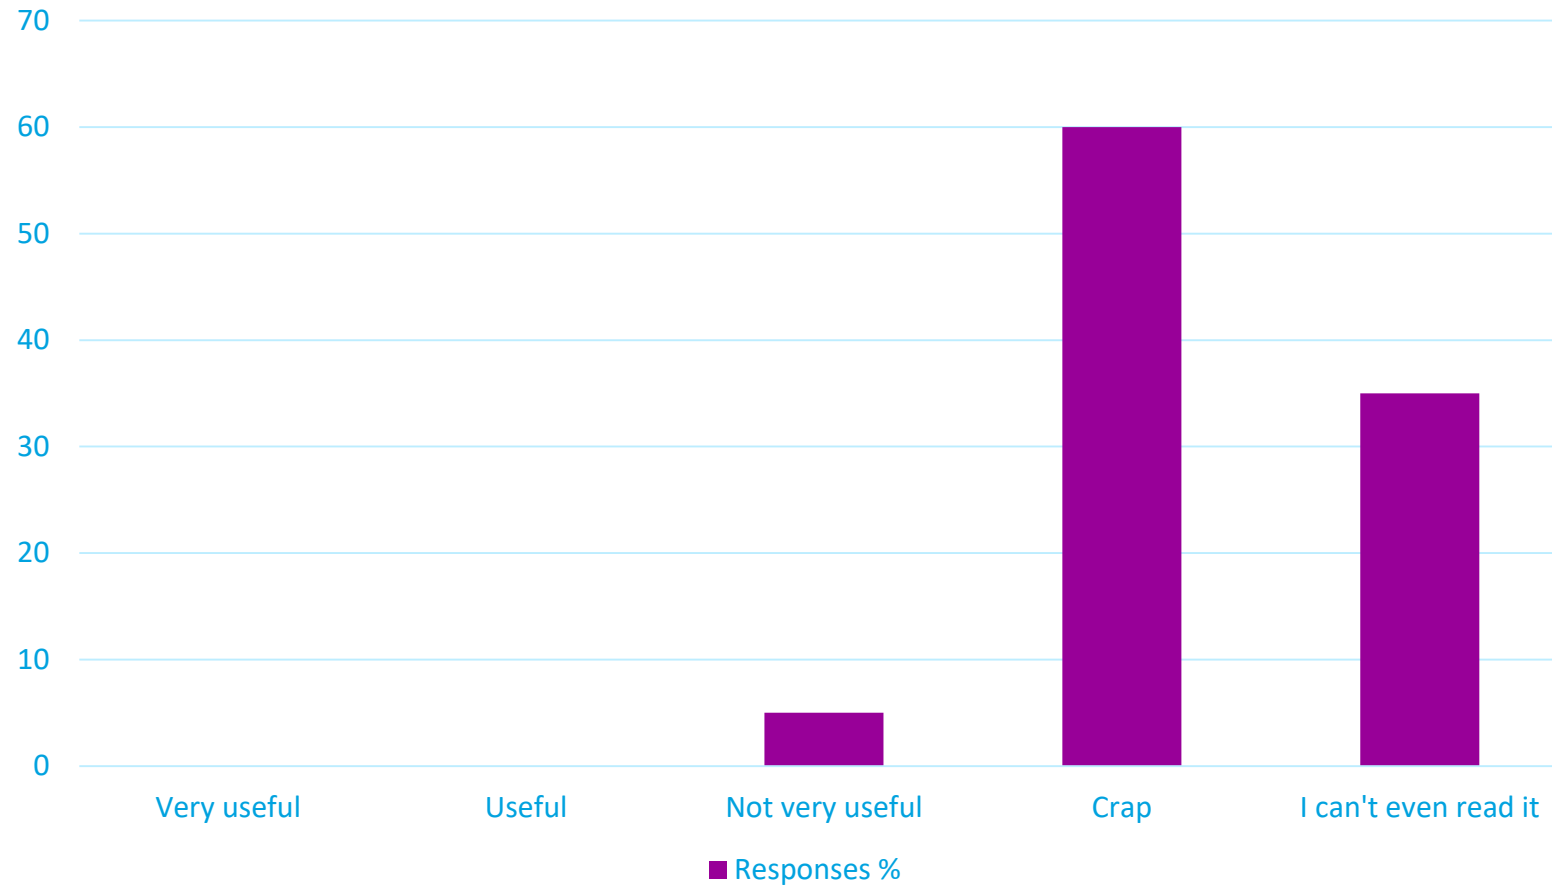

How many of you  
find this Reference  
Architecture useful  
for your business?

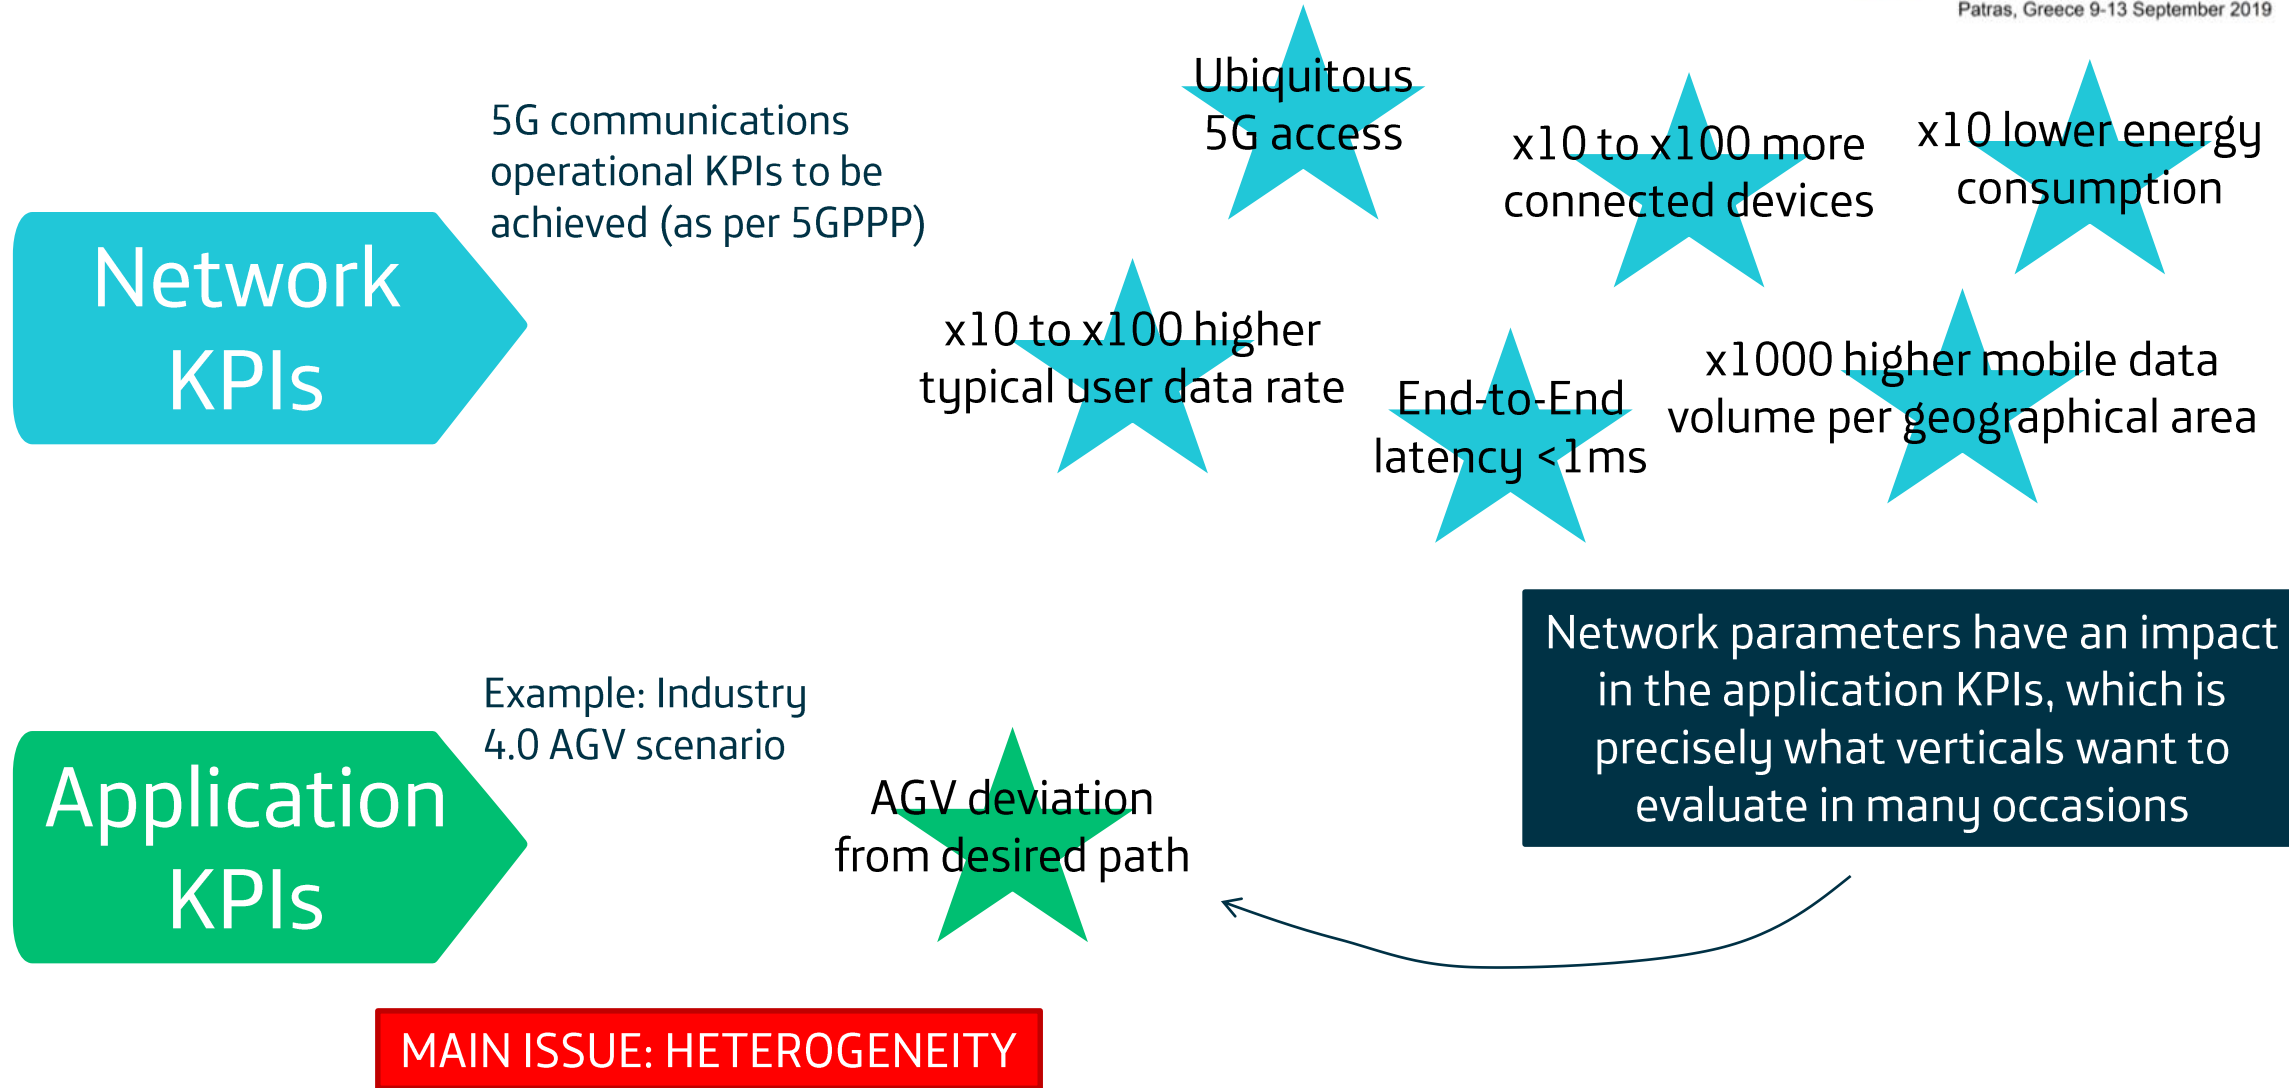

Source: Microsoft Cybersecurity Reference Architecture

# Predicted results\*

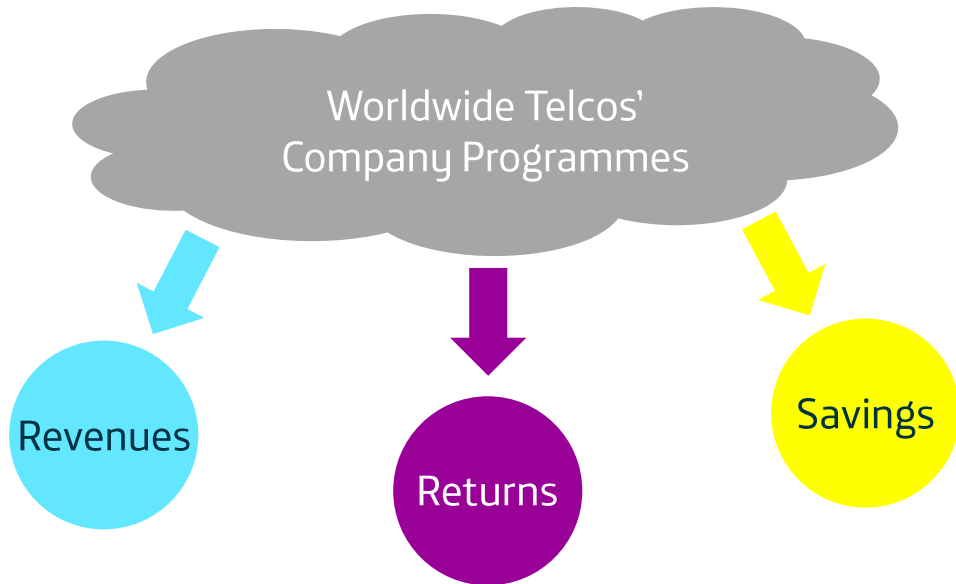

\* No offense intended to owner of Reference Architecture; this invented exercise is just for concept illustration purposes

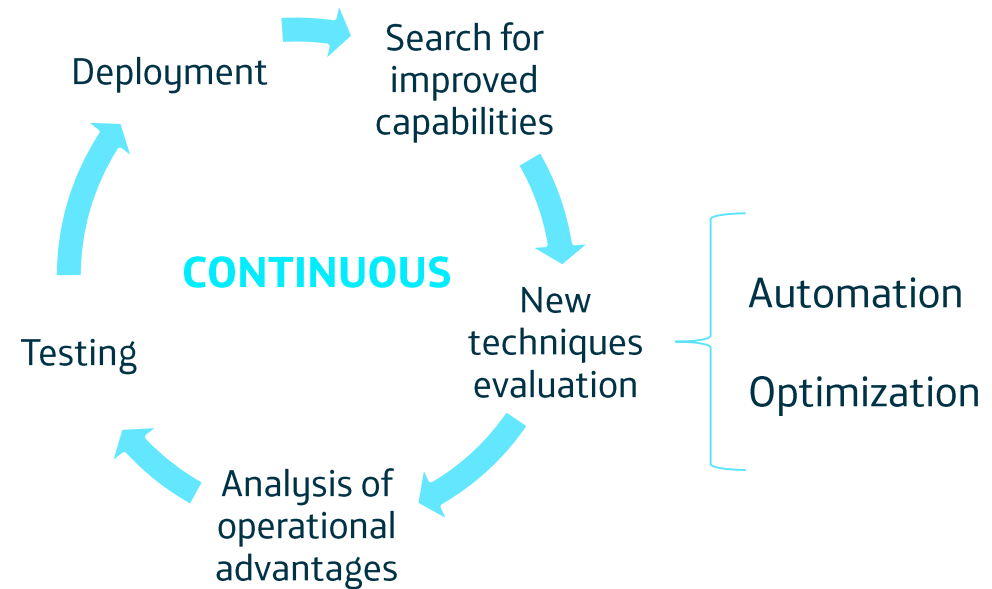

# About 5G KPIs

# OSM and telco operators

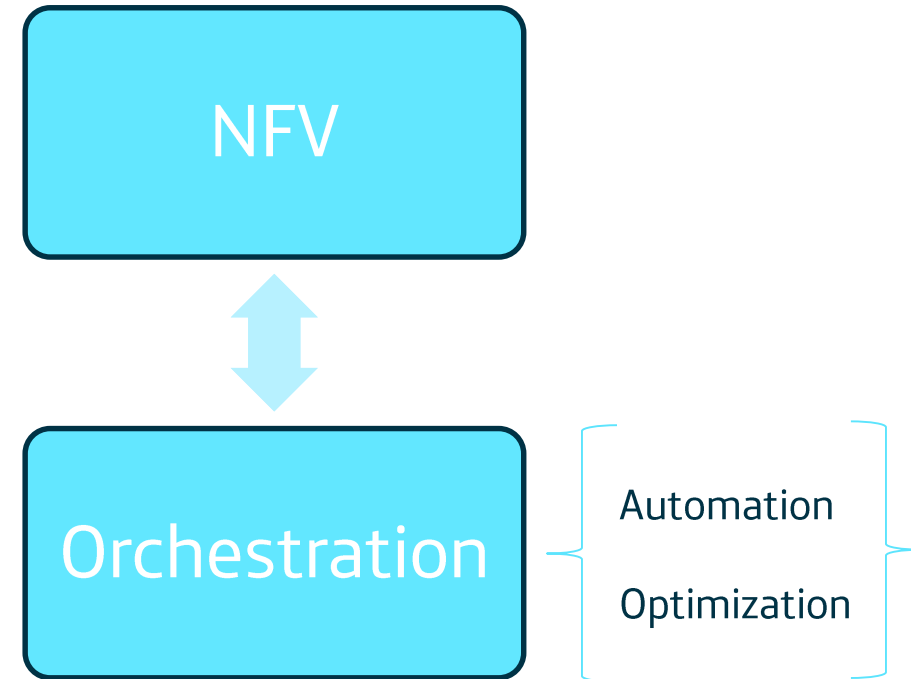

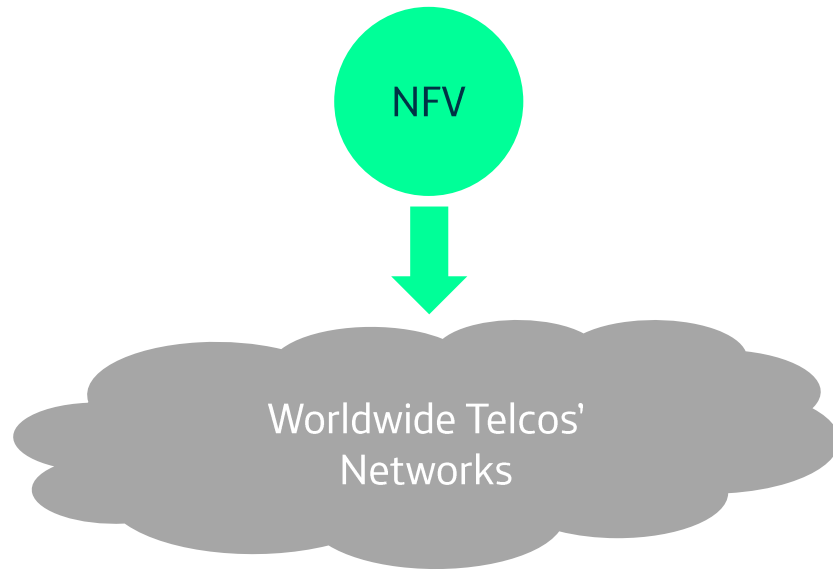

Some of these can be derived from  
**IMPROVED SERVICE DEPLOYMENT  
CAPABILITIES**

# OSM and telco operators (cont.)

INTEREST BY OPERATORS IN  
MANO IMPLEMENTATIONS,  
**LIKE OSM**

# What about Verticals?

**NEW  
SERVICE!**

## Main phases

Development

Testing

Deployment

# Complexity of testing by Verticals

## Experiments Heterogeneity

- Each Vertical its own Use Cases
- Reusable VNFs? Fake VNFs?
- No lab fits all

## Vertical/Facility Interaction

- Do they speak the same language?
- What testing services are offered?
- How do I use them?

## 5G Testing Scenarios

- Very specialized (equipment cost)
- Regionally distributed
- Very occupied

## Testing Methodology

- Is it secure?
- Does it have an impact in the rest of the infrastructure?
- Is it standard?

## Validation of results

- Can I measure the required KPIs?
- Assurance of appropriate conditions (i.e. close to production conditions)
- Can I replicate my tests?

# Few comments on few topics...

## Experiments Heterogeneity

- Each Vertical its own Use Cases
- **Reusable VNFs?** Fake VNFs?
- No lab fits all

## Vertical/Facility Interaction

- **Do they speak the same language?**
- What test cases are offered?
- How to use them?

**DESCRIPTORS**

## 5G Testing Scenarios

- Very specialized (equipment cost)
- **Regionally distributed**
- Very occupied

## Testing Methodology

- Is it secure?
- Does it have an impact on the rest of the network structure?
- Is it standard?

**SLICES**

## Validation of results

- Can I measure the required KPIs?
- Assurance of appropriate conditions (i.e. close to production conditions)
- **Can I replicate my tests?**

# The OSM example

## LOCAL DEVELOPMENT & TESTING

## TEST POOL FOR DEVELOPERS

## SERVICE PROVIDER

- ✓ Open development environment
- ✓ Functional testing
- ✓ Low cost
- ✓ Integration from the beginning

- ✓ Real servers and switches
- ✓ Performance tests (EPA can be enforced)
- ✓ Cost effective shared infrastructure
- ✓ Move the value to VNF services

- ✓ Production/pre-production environment
- ✓ Real network scenarios
- ✓ Final service configuration
- ✓ Fast deployment
- ✓ Low final integration cost
