OSM usage

Gerardo García (Telefónica, OSM TSC Chair)

OSM Training Seminar - SLICES

13/02/2024

Registering VIM accounts

Registering VIMs/Clouds

- With the GUI

The screenshot displays the Open Source MANO web interface. At the top left is the logo and text 'Open Source MANO'. On the top right, it shows 'OSM Version 15.0.0', a dropdown for 'Projects (slices1)', and a dropdown for 'User (slices1)'. A navigation breadcrumb at the top center shows 'Dashboard > Projects > slices1 > VIM Accounts'. On the left, a vertical sidebar contains menu items: 'Dashboard', 'PROJECT' (header), 'Packages', 'Instances', 'SDN Controller', 'VIM Accounts', 'K8s', 'OSM Repositories', and 'WIM Accounts'. The main content area is titled 'VIM Accounts' and includes a 'Map View' button and a '+ New VIM' button. Below the title, there are status indicators: 'PROCESSING' (yellow clock icon), 'ENABLED' (green checkmark icon), and 'ERROR' (red X icon). To the right of these indicators is an 'Entries' dropdown set to '10' and a refresh icon. A table header is visible with columns: 'Name', 'Identifier', 'Type', 'Operational Status', 'Description', and 'Actions'. Below the header, there are search input fields for 'Name' and 'Identifier', and dropdown menus for 'Type' and 'Operational Status'. A 'Description' search field is also present. The table body is currently empty, displaying the message 'No data available in table'.

Registering VIMs/Clouds

- With the GUI

New VIM Account

Mandatory fields are marked with an asterisk (*)

Name*	<input type="text" value="Name"/>	VIM Project/Tenant Name*	<input type="text" value="VIM Project/Tenant Name"/>
Type*	<input type="text" value="Select"/>	Description	<input type="text" value="Description"/>
<small>To add a new TYPE, Please enter input above</small>			
VIM URL*	<input type="text" value="VIM URL"/>	Schema Type	<input type="text" value="Schema Type"/>
VIM Username*	<input type="text" value="VIM Username"/>	VIM Password*	<input type="text" value="VIM Password"/>
VIM Location	<input type="text" value="Name"/>	<input type="text" value="Latitude"/>	<input type="text" value="Longitude"/>
<small>Type the Data location name, Latitude & Longitude to show in map view</small>			
Upload Config	<input type="button" value="Choose File"/> <input type="button" value="Browse"/>		
<small>Please upload file with .yaml or .yml format</small>			

Registering VIMs/Clouds

- With the client:

```
osm vim-create --name etsi-vim-slicesX --account_type openstack \  
  --auth_url http://172.21.247.1:5000/v3 \  
  --user slicesX --password "slicesXFeb24!" --tenant slicesX\  
  --description "ETSI VIM" \  
  --config '{management_network_name: osm-ext,  
            dataplane_physical_net: physnet2}'
```

- Register a VIM account
 - Name: etsi-vim-slicesX
 - Type: openstack
 - Auth URL: <http://172.21.247.1:5000/v3>
 - User, password and tenant/project: the ones in the Google Spreadsheet
 - Description: "ETSI VIM"
 - Config params:
 - management_network_name: osm-ext
 - dataplane_physical_net: physnet2

VIM monitoring

- Airflow:

- Osm-slices-1: <http://172.21.249.14:11193> (admin, admin)
- Osm-slices-2: <http://172.21.249.74:17641> (admin, admin)
- Osm-slices-3: <http://172.21.242.242:5873> (admin, admin)
- Osm-slices-4: <http://172.21.249.60:16206> (admin, admin)

- Prometheus dashboard:

- Osm-slices-1: <http://172.21.249.14:9091>
- Osm-slices-2: <http://172.21.249.74:9091>
- Osm-slices-3: <http://172.21.242.242:9091>
- Osm-slices-4: <http://172.21.249.60:9091>
- Check metric: `osm_vim_status`

Registering K8s clusters

Exercise

- Register a K8s cluster with the client

```
osm k8scluster-add --creds whitemist-kubeconfig.yaml \  
  --version "v1.26" \  
  --vim etsi-vim-slicesX \  
  --k8s-nets "{net1: osm-ext}" \  
  --description "K8s cluster" \  
  --skip-jujubundle \  
k8scluster-slicesX
```

Create your own Kubernetes cluster

The simplest way is to create a VM and install K3s like this:

```
curl -sfL https://get.k3s.io | sh -  
sudo k3s kubectl get node  
mkdir .kube  
sudo mv /etc/rancher/k3s/k3s.yaml .kube/config  
sudo chown $USER:$USER .kube/config
```

Modeling NF and NS

OSM provides a platform to create Networks as a Service and to manage them conveniently later...

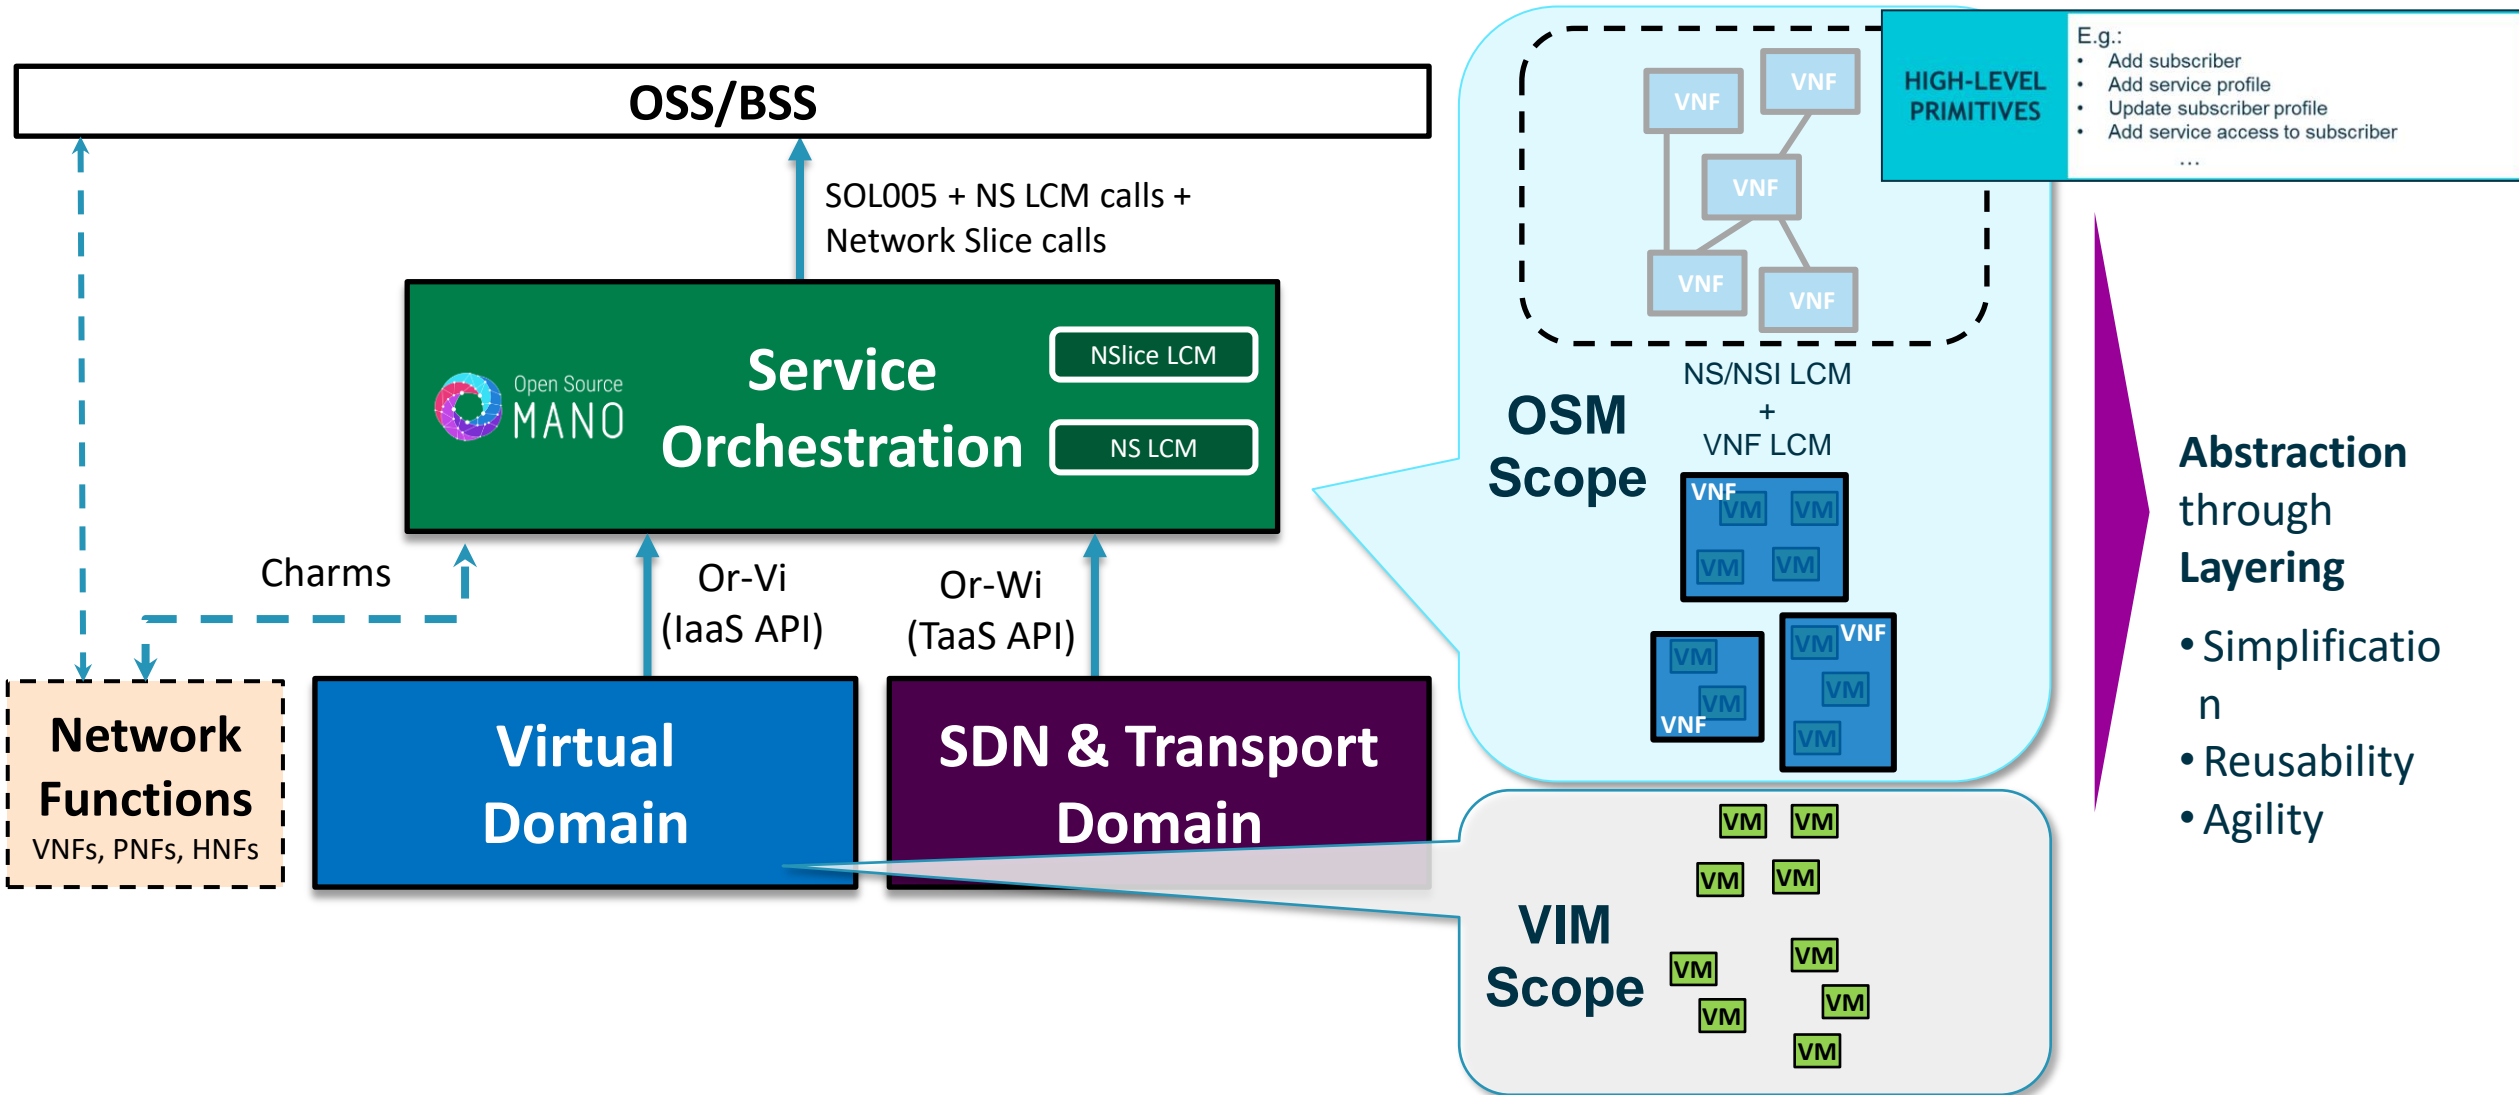

OSM manages the low-level setup for Network Functions, so that they are ready for use.

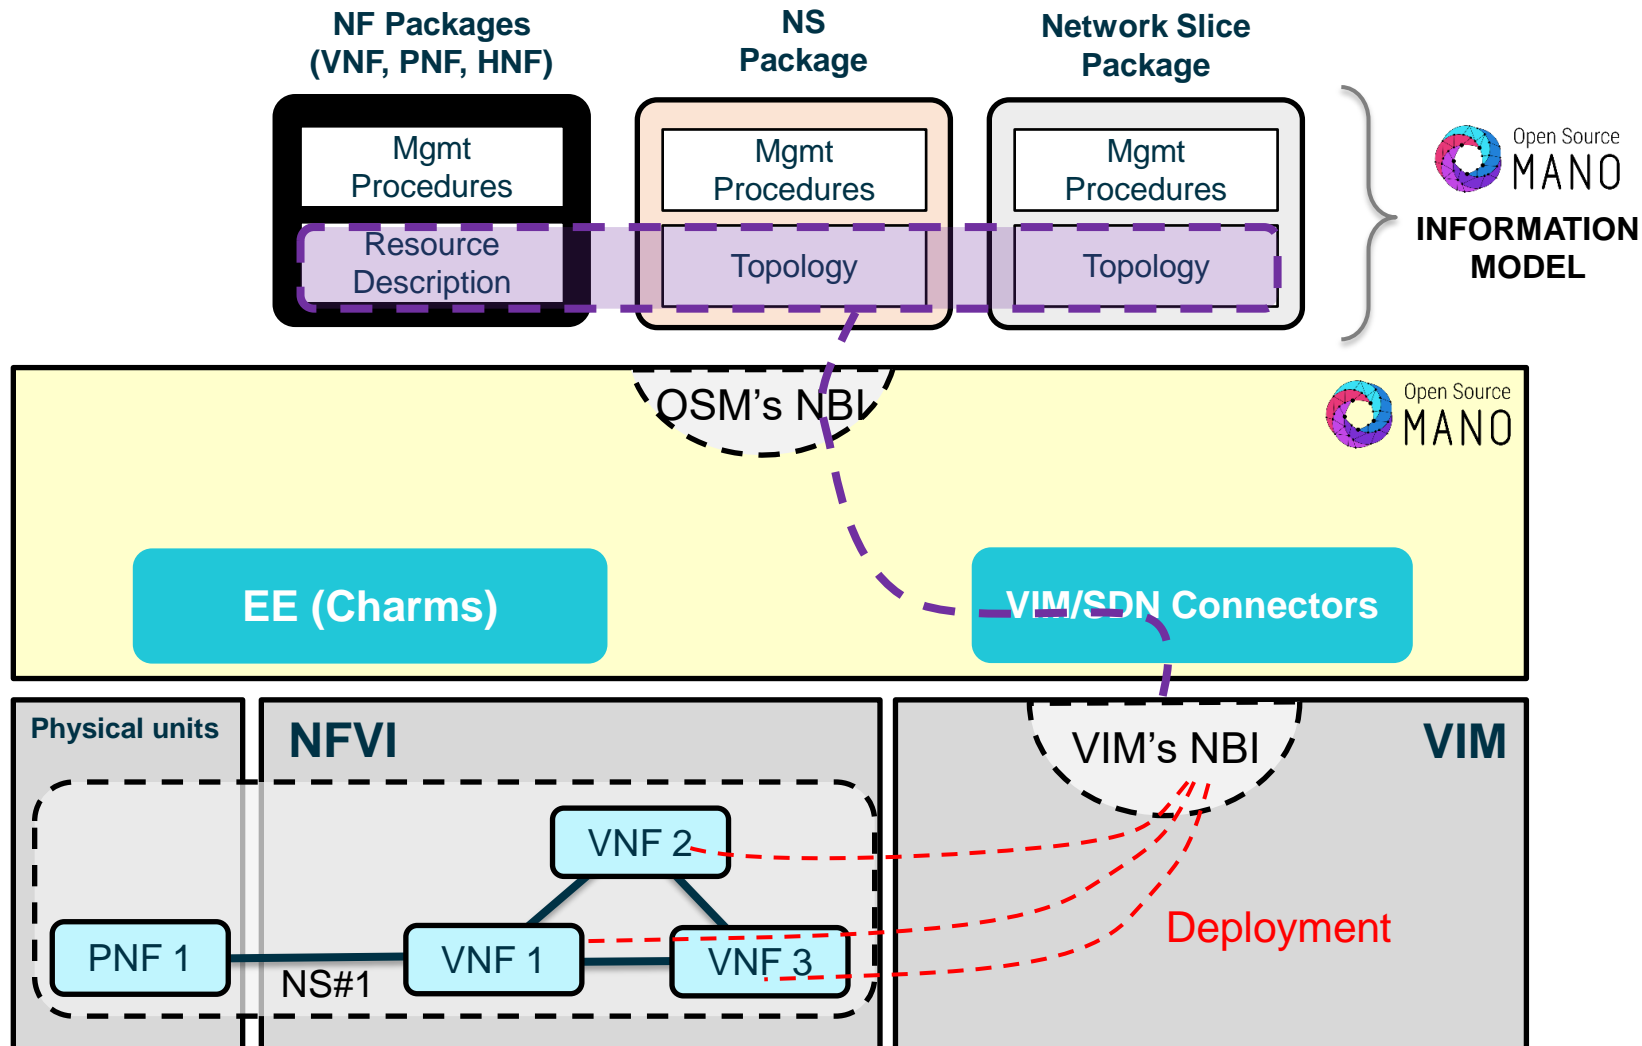

- It covers in 100% the role of a kind of **specialized PaaS for Network Functions**, with 2 key features:
 1. **Complex connectivity** setup, including EPA and underlay scenarios.
 2. Solve **inter-NF relations**.
- Returns: **NS/NF ready for its use and properly connected**:
 - Exposes the **“function” and its lifecycle, not its components**.
 - Presented as a whole (i.e., abstracts from low-level details of the NF).
 - Easy (standardized) access to NF's lifecycle operations, via **primitives**.
- This follows well-known paradigms in **IT and public clouds**.

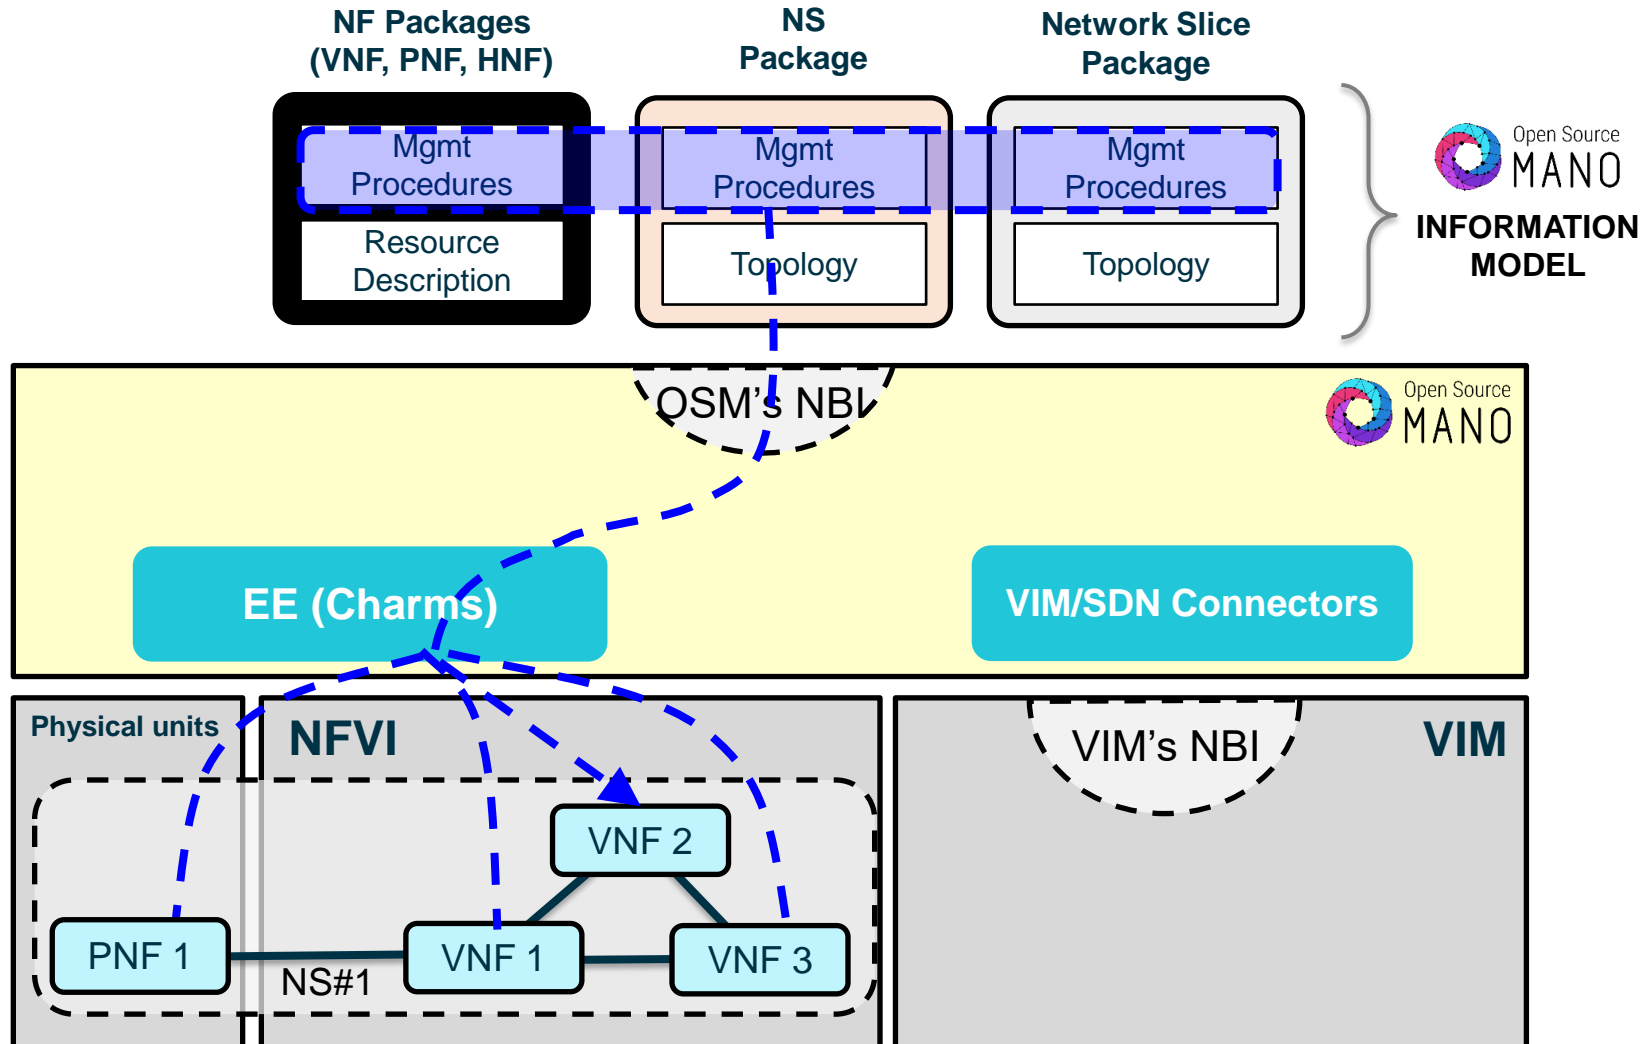

OSM provides a platform to create Networks as a Service (NaaS) and to manage them conveniently

Packages embed resource description and operational procedures

Packages embed resource description and operational procedures

All in OSM is model-driven to make VNFs and NS as portable and reusable as possible

(V)NF PACKAGES:

- **Provided by the vendor**, fully describe their own product:
 - Topology
 - Parametrized
 - Actions for Day-0, Day-1, and Day-2
- **Doesn't** need to know any detail about :
 - The target infrastructure
 - Other components that will be part of the scenario

All in OSM is model-driven to make VNFs and NS as portable and reusable as possible

(V)NF PACKAGES:

NS PACKAGES / SLICE PACKAGES:

- Describes how to combine a set of NF packages to create a specific scenario.
- Parametrized.
- Have actions for Day-0, Day-1, and Day-2.

Slice Packages work similarly, but using NS as building blocks^()*

^(*) NS instances play the role of Slice Subnets of a given slice. Some of them may be shared by more than one slice instance. This is taken into account by OSM, so a slice is more sophisticated than just a “NS of NS”.

All in OSM is model-driven to make VNFs and NS as portable and reusable as possible

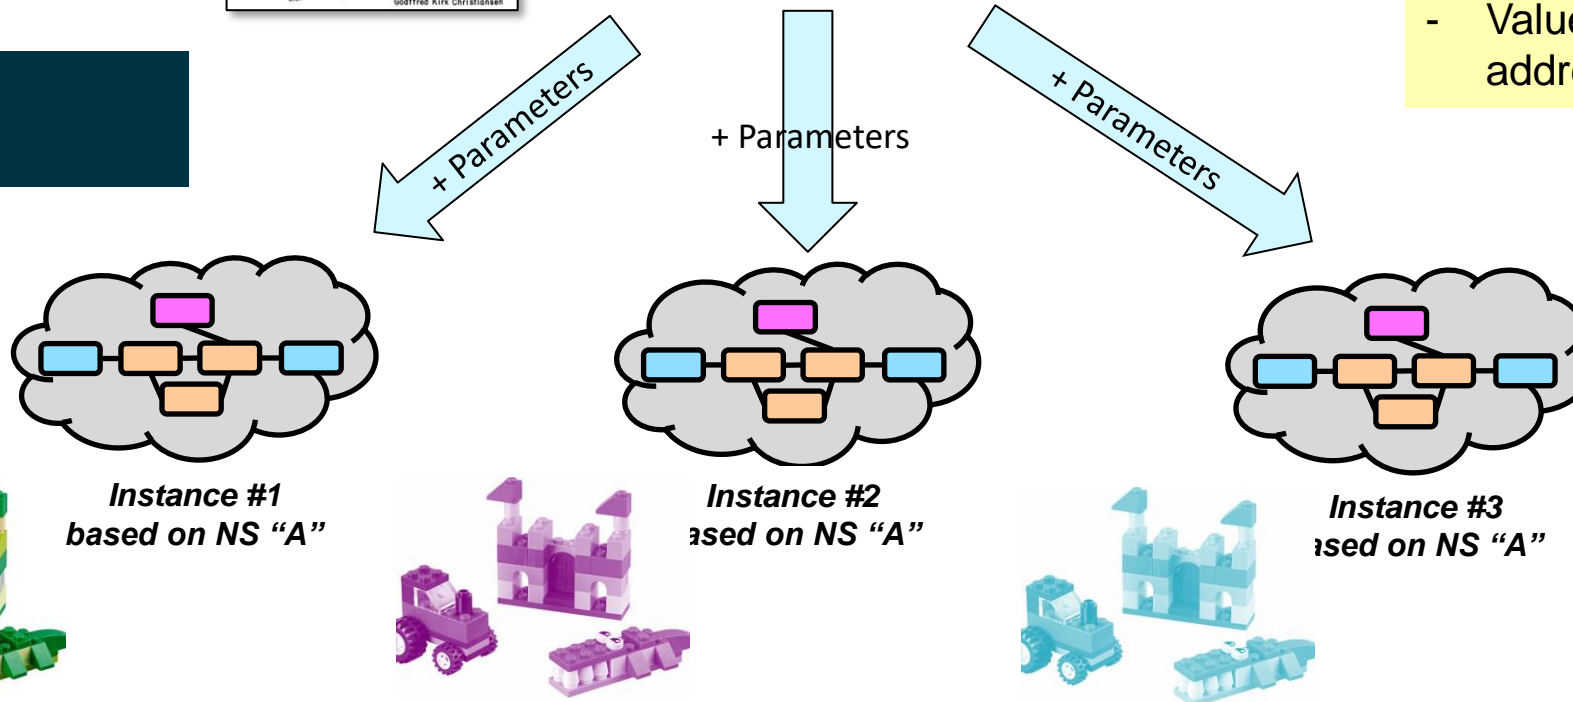

NS PACKAGES / SLICE PACKAGES:

Upon instantiation, you just need to decide:

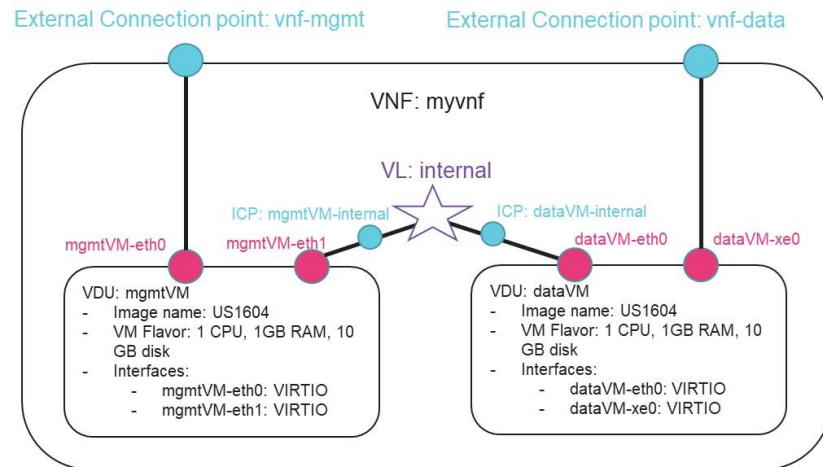

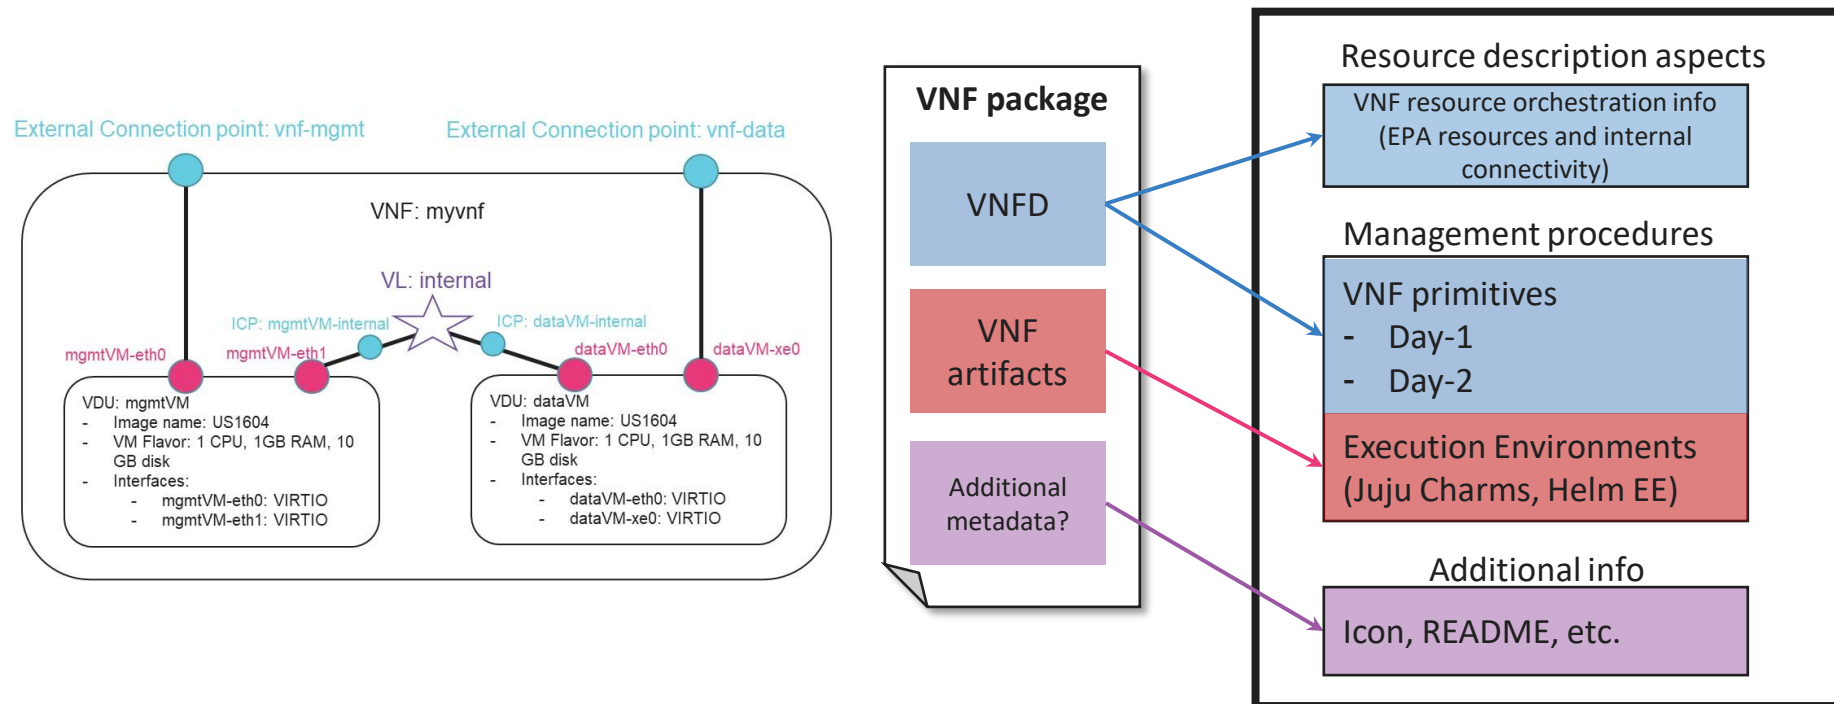

- The target VIM (or VIMs)
- Values for the parameters (IP addresses, keys, etc.)

DEPLOYED INSTANCES:

Modeling NF

VNF package vs VNF descriptor

Modeling NF VNF descriptor

Descriptors are written in YAML and contain:

- Topology description (VDU, internal VLD, Connection Points)
- Scaling-groups
- Monitoring params
- Reference to day-0 configuration file
- Execution environment list (e.g. charms, monitoring environments)
- Day-1 primitives (sequence)
- Day-2 primitives

```
vnfd:
  description: Virtual Desktop Computer
  ext-cpd:
  - id: virtual-pc-private-ext
    int-cpd:
      cpd: eth0-int
      vdu-id: virtual-pc
  id: hackfest_virtual-pc_vnf
  mgmt-cp: virtual-pc-mgmt-ext
  product-name: hackfest_virtual-pc_vnf
  sw-image-desc:
  - id: ubuntu20.04
    image: ubuntu20.04
  vdu:
  - cloud-init-file: virtual-pc_init
    description: virtual-pc
    id: virtual-pc
    int-cpd:
    - id: eth0-int
      virtual-network-interface-requirement:
      - name: eth0
        virtual-interface:
          type: PARAVIRT
    - id: eth1-int
  version: '1.0'
  virtual-compute-desc:
  - id: virtual-pc-vdu-compute
    virtual-cpu:
      num-virtual-cpu: 8
    virtual-memory:
      size: 32.0
  virtual-storage-desc:
  - id: virtual-pc-vdu-storage
```

Modeling NF CNF descriptor

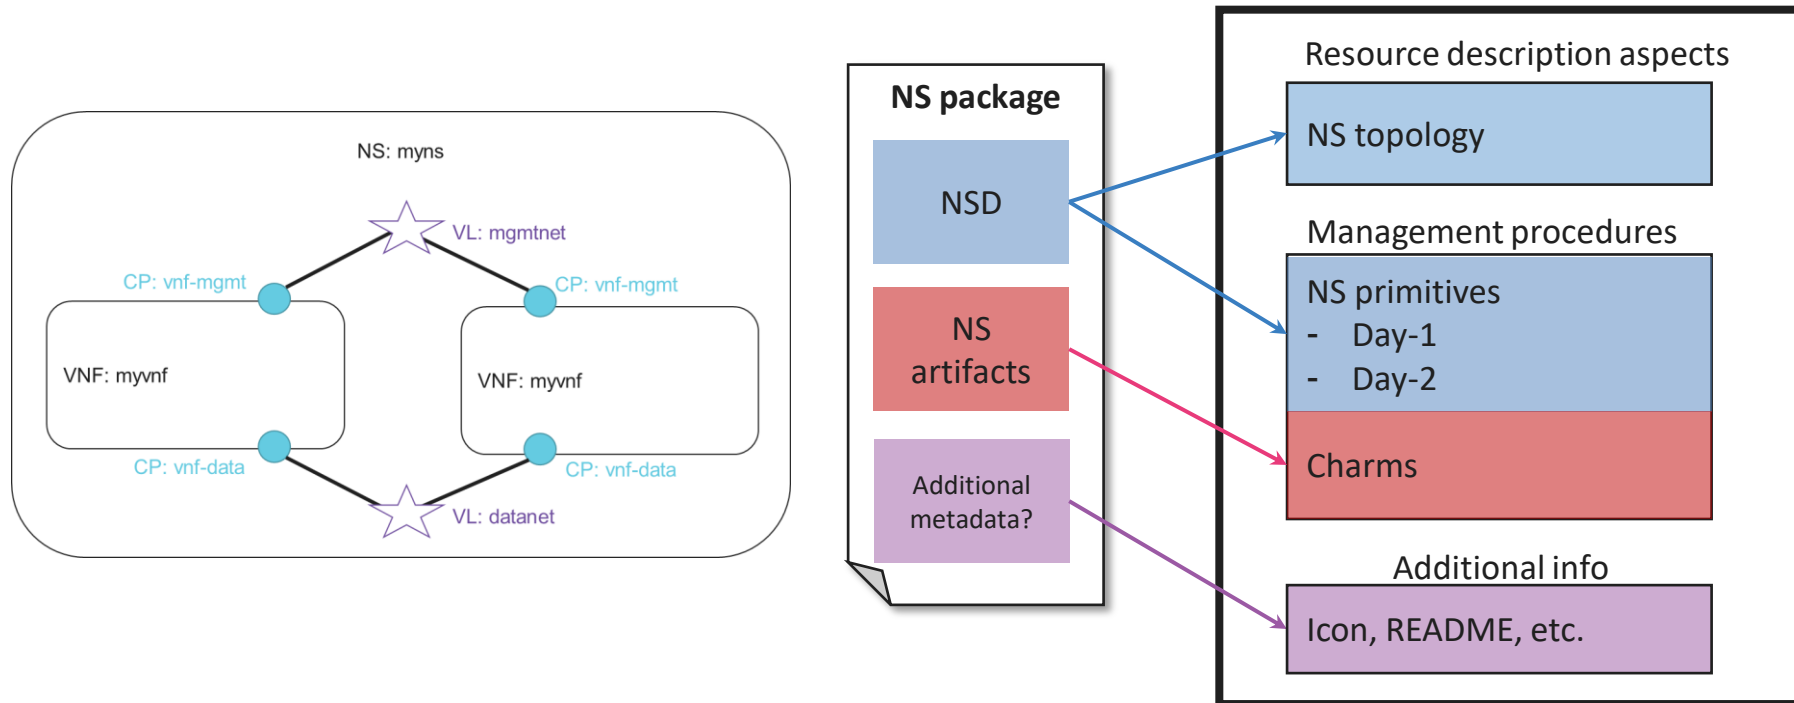

CNF descriptors must contain:

- List of KDU (and their associated helm-chart or juju-bundle)
- K8s cluster requirements

```
vnfd:  
  description: CNF with single KDU  
  df:  
    - id: default-df  
  ext-cpd:  
    - id: mgmt-ext  
      k8s-cluster-net: mgmtnet  
  id: openldap_knf  
  k8s-cluster:  
    nets:  
      - id: mgmtnet  
  kdu:  
    - name: ldap  
      helm-chart: stable/openldap  
  mgmt-cp: mgmt-ext  
  product-name: openldap_knf  
  provider: Telefonica  
  version: '1.0'
```

Modeling NS

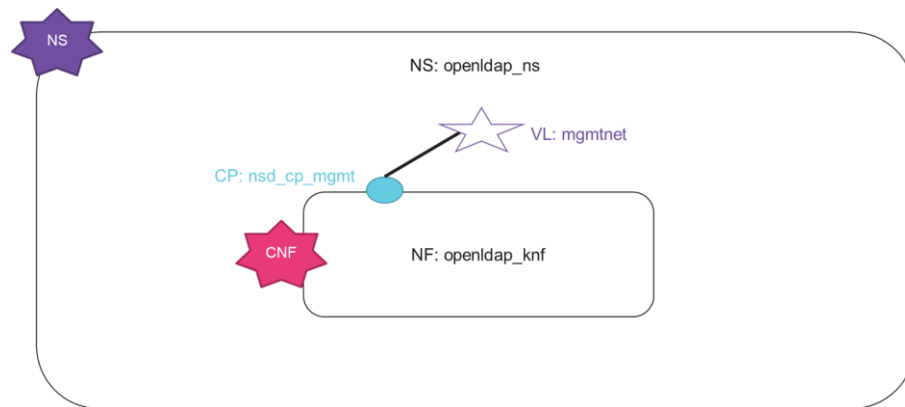

NS package vs NS descriptor

Modeling NF NS descriptor

Descriptors are written in YAML and contain:

- Topology description (NF, VL)

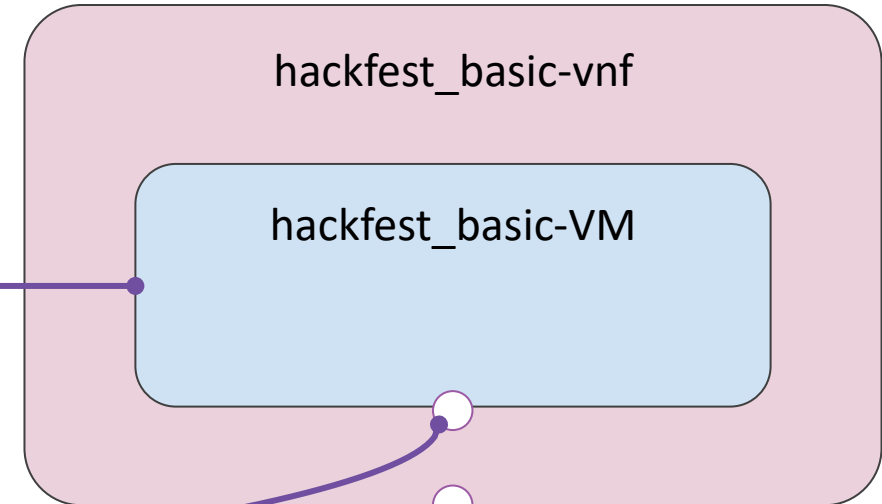

```
nsd:  
  nsd:  
    - description: Simple NS with a single VNF and a  
      single VL  
    df:  
      - id: default-df  
    vnf-profile:  
      - id: vnf  
    virtual-link-connectivity:  
      - constituent-cpd-id:  
        - constituent-base-element-id: vnf  
          constituent-cpd-id: vnf-cp0-ext  
          virtual-link-profile-id: mgmtnet  
        vnf-d-id: hackfest_basic-vnf  
  id: hackfest_basic-ns  
  name: hackfest_basic-ns  
  version: 1.0  
  virtual-link-desc:  
    - id: mgmtnet  
      mgmt-network: true  
  vnf-d-id:  
    - hackfest_basic-vnf
```

VNFD for hackfest_basic_vnf – Part 1

```

vnfd:
  description: A basic VNF descriptor w/ one VDU
  df:
  - id: default-df
    instantiation-level:
  - id: default-instantiation-level
    vdu-level:
  - number-of-instances: 1
    vdu-id: hackfest_basic-VM
  vdu-profile:
  - id: hackfest_basic-VM
    min-number-of-instances: 1
  ext-cpd:
  - id: vnf-cp0-ext
    int-cpd:
    cpd: vdu-eth0-int
    vdu-id: hackfest_basic-VM

  id: hackfest_basic-vnf
  mgmt-cp: vnf-cp0-ext
  product-name: hackfest_basic-vnf
  
```

https://osm.etsi.org/gitlab/vnf-onboarding/osm-packages/-/blob/master/hackfest_basic_vnf/hackfest_basic_vnfd.yaml

VNFD for hackfest_basic_vnf – Part 2

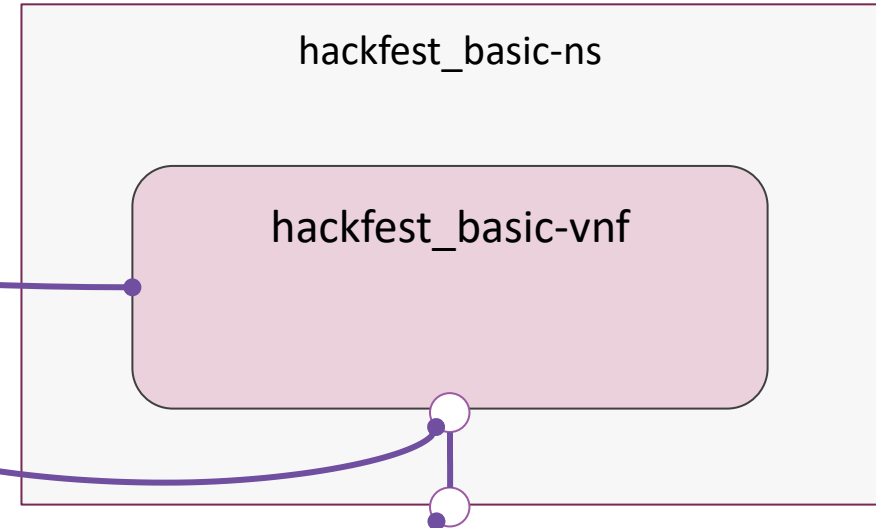

```
vdu:  
- id: hackfest_basic-VM  
  name: hackfest_basic-VM  
  sw-image-desc: ubuntu20.04  
  virtual-compute-desc: hackfest_basic-VM-compute  
  virtual-storage-desc:  
  - hackfest_basic-VM-storage  
int-cpd:  
- id: vdu-eth0-int  
  virtual-network-interface-requirement:  
  - name: vdu-eth0  
    virtual-interface:  
      type: PARAVIRT  
  
virtual-compute-desc:  
- id: hackfest_basic-VM-compute  
  virtual-cpu:  
    num-virtual-cpu: 1  
  virtual-memory:  
    size: 1.0  
virtual-storage-desc:  
- id: hackfest_basic-VM-storage  
  size-of-storage: 10
```

NSD for hackfest_basic_ns

```

nsd:
  nsd:
    - description: Simple NS with a single VNF and a single VL
  df:
    - id: default-df
  vnf-profile:
    - id: vnf
      vnf-id: hackfest_basic-vnf
      virtual-link-connectivity:
        - constituent-cpd-id:
            - constituent-base-element-id: vnf
              constituent-cpd-id: vnf-cp0-ext
          virtual-link-profile-id: mgmtnet
  id: hackfest_basic_ns
  name: hackfest_basic_ns
  version: 1.0
  virtual-link-desc:
    - id: mgmtnet
      mgmt-network: true
  vnf-id:
    - hackfest_basic-vnf
  
```

https://osm.etsi.org/gitlab/vnf-onboarding/osm-packages/-/blob/master/hackfest_basic_ns/hackfest_basic_nsd.yaml

Adding NF and NS packages

Reference: OSM packages

- Gitlab: <https://osm.etsi.org/gitlab/vnf-onboarding/osm-packages>

```
git clone --recursive https://osm.etsi.org/gitlab/vnf-onboarding/osm-packages.git
```

Exercise

- Use OSM client to upload hackfest_basic_vnf package
- Use OSM client to upload hackfest_basic_ns package
- Use OSM GUI to upload hackfest_basic_metrics_vnf package
- Use OSM GUI to upload hackfest_basic_metrics_ns package

Solution (with OSM client)

```
git clone --recursive https://osm.etsi.org/gitlab/vnf-onboarding/osm-packages.git
```

```
cd osm-packages
```

```
# Optional validation and build
```

```
# osm package-validate hackfest_basic_vnf
```

```
# osm package-validate hackfest_basic_ns
```

```
# osm package-build hackfest_basic_vnf
```

```
# osm package-build hackfest_basic_ns
```

```
osm nfpkg-create hackfest_basic_vnf
```

```
osm nspkg-create hackfest_basic_ns
```

NS instantiation and operation

Instantiation and termination

Exercise

- Launch a NS instance of `hackfest_basic_ns`
- Check VMs created in Openstack
- Check VNF reachability
- Terminate the NS instance

Solution (with OSM client)

Launch instance

```
osm ns-create --ns_name hfbasic --nsd_name hackfest_basic-ns \  
             --vim_account etsi-vim-slicesX \  
             --ssh_keys ~/.ssh/id_rsa.pub \  
             --config '{vld: [ {name: mgmtnet, vim-network-name: osm-ext} ] }'
```

Check VMs were created in Openstack

```
openstack server list
```

Find mgmt IP address of the VNF

```
osm vnf-list
```

```
osm vnf-show <VNF_ID>
```

Check VNF reachability

```
ssh ubuntu@<IP_ADDRESS>
```

Terminate instance

```
osm ns-delete hfbasic
```

NS instantiation and operation Working with CNF

Working with CNF

```
# Add packages
osm vnfpkg-create  openldap_knf
osm nspkg-create  openldap_ns

# Launch NS
osm ns-create --ns_name ldap --nsd_name openldap_ns --vim_account etsi-vim-slicesX
--config '{vld: [ {name: mgmtnet, vim-network-name: osm-ext}],
additionalParamsForVnf: [ {member-vnf-index: openldap, additionalParamsForKdu: [
{kdu_name: ldap, additionalParams: {service: {type: LoadBalancer }, adminPassword:
admin}} ] } ] }'
```

```
# Check number of replicas
osm vnf-show <VNF_ID> --kdu ldap | yq -r .config.replicaCount
```

Working with CNF

Upgrade CNF

```
osm ns-action --action_name upgrade --vnf_name openldap --kdu_name ldap --params  
'{"replicaCount":"3"}' ldap
```

Check number of replicas

```
osm vnf-show <VNF_ID> --kdu ldap | yq -r .config.replicaCount
```

Rollback CNF

```
osm ns-action --action_name rollback --vnf_name openldap --kdu_name ldap ldap
```

Check number of replicas

```
osm vnf-show <VNF_ID> --kdu ldap | yq -r .config.replicaCount
```

Terminate NS

```
osm ns-delete ldap
```

NS instantiation and operation Scaling

Scaling scenario

```
# Add packages
osm nfpkg-create hackfest_basic_metrics_vnf
osm nspkg-create '/robot-systest/osm-packages/hackfest_basic_metrics_ns

# Launch NS
osm ns-create --ns_name manual_scaling_test --nsd_name hackfest_basic-ns-metrics --
vim_account etsi-vim-slicesX --config '{vld: [ {name: mgmtnet, vim-network-name: osm-ext} ]
}' --ssh_keys ~/.ssh/id_rsa.pub

# Scale out
osm vnf-scale --scaling-group vdu_autoscale --scale-out manual_scaling_test vnf

# Scale in
osm vnf-scale --scaling-group vdu_autoscale --scale-in manual_scaling_test vnf

# Terminate NS
osm ns-delete manual_scaling_test
```

NS instantiation and operation Auto-healing

Auto-healing scenario

```
# Add packages
```

```
osm vnfpkg-create autoheal_vnf  
osm nspkg-create autoheal_ns
```

```
# Launch NS
```

```
osm ns-create --ns_name heal_test --nsd_name autoheal_nsd --vim_account etsi-vim-slicesX --  
config '{vld: [ {name: mgmt, vim-network-name: osm-ext} ] }' --ssh_keys ~/.ssh/id_rsa.pub
```

```
# Force error in VM
```

```
openstack server set --state error <OPENSTACK_VM_ID>
```

```
# Wait for VM to be auto-healed
```

```
osm ns-op-list
```

```
# Terminate NS
```

```
osm ns-delete heal_test
```
